MLS® LASER THERAPY

Raising the standard for laser therapy, the innovative **Multiwave Locked System®** (MLS) technology was developed in an effort to produce an efficient and simultaneous effect on pain, inflammation, and edema.

MLS Laser Therapy is a unique type of Class IV laser that utilizes a patented emission system to precisely synchronize simultaneous dual wavelengths, as well as simultaneous continuous and pulsed emissions, resulting in optimum clinical effectiveness.

The MLS emission system exceeds the limitations of traditional low-level therapy lasers by providing more efficient biostimulatory results with less energy in considerably less time. Additionally, with an enhanced safety profile, this technology avoids concerns associated with other high-power Class IV therapy lasers, such as the risk of thermal tissue damage.

This groundbreaking technology has been adapted into the only robotic therapy laser available—the **M6 MLS Therapy Laser!** Learn how your patients and practice can benefit from going robotic!

MULTI-TARGETING FUNCTIONALITY FOR WIDER AREAS

The distinctive robotized multi-target function exclusive to the M6 MLS Therapy Laser's multidirectional optical group allows the laser to automatically and evenly scan wide areas to help produce an immediate response from the treated tissues.

MINIMIZE UNNECESSARY LABOR COSTS

The robotic M6 MLS Therapy Laser's automatic emission system allows medical practitioners to offer laser therapy to patients without the additional expenses of employing a dedicated technician.

COMPLY WITH SOCIAL DISTANCING

Using the touch-screen display on the backside of the laser, the operator can align the robotic head and specify treatment protocols at a safe distance from the patient.

After protocols are set, the M6 MLS Therapy Laser automatically treats the targeted area without assistance allowing the staff and patients to practice social distancing of 6-feet or more during the treatment session.

CONSISTENT DOSING FOR BETTER OUTCOMES

By automatically calculating the necessary energy emission based on set parameters, the Robotic M6 MLS Therapy Laser is able to provide consistent and accurate dosing for each patient.

The automatic and even application leads to better and more predictable outcomes for patients than manually operated and stationary therapy lasers.

MINIMIZE CONTAMINATION CONCERNS

The M6 MLS Therapy Laser's robotic head's non-contact emission system minimizes contamination concerns.

With an optimal distance of 8 inches (20 centimeters) from the patient's skin, the M6 eliminates the any possibility of physical contact during the treatment session.

INCREASED PRACTICE PRODUCTIVITY

With automatic application and the enhanced safety profile of the M6 MLS Laser Therapy, there is no need for a dedicated technician to operate the machine throughout treatment sessions.

While one patient is receiving their treatment with the M6 MLS Therapy Laser, doctors and staff can dedicate their attention to other patients and practice services to increase the overall productivity of the practice.

With MLS Laser Therapy, medical practitioners can leverage technology to satisfy patient demands for effective drug-free pain management.

Learn more about what sets the Robotic M6 MLS Therapy Laser apart from other therapeutic lasers. Call **800.889.4184 x125** or visit **celasers.com** to schedule a virtual or on-site demonstration.
